## Introduction to deep learning

Quiz, 10 questions

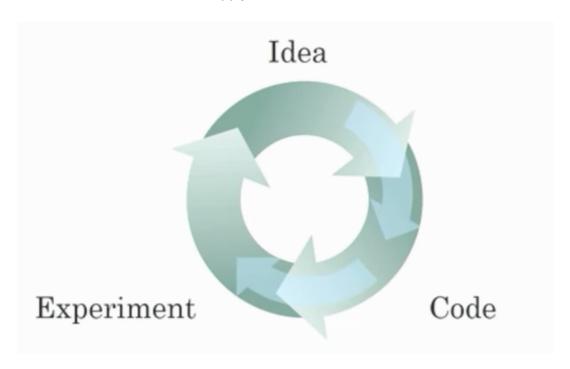

1 point		
1. What d	oes the analogy "Al is the new electricity" refer to?	
	Similar to electricity starting about 100 years ago, Al is transforming multiple industries.	
	Through the "smart grid", Al is delivering a new wave of electricity.	
	Al is powering personal devices in our homes and offices, similar to electricity.	
	Al runs on computers and is thus powered by electricity, but it is letting computers do things not possible before.	
1 point  2. Which of these are reasons for Deep Learning recently taking off? (Check the three options that apply.)		
	Deep learning has resulted in significant improvements in important applications such as online advertising, speech recognition, and image recognition.	
	We have access to a lot more data.	
	We have access to a lot more computational power.	
	Neural Networks are a brand new field.	

## Introduction to deep learning

Quiz, 10 questions

3.

Recall this diagram of iterating over different ML ideas. Which of the statements below are true? (Check all that apply.)

Being able to try out ideas quickly allows deep learning engineers to iterate more quickly.
Faster computation can help speed up how long a team takes to iterate to a good idea.
It is faster to train on a big dataset than a small dataset.
Recent progress in deep learning algorithms has allowed us to train good models faster (even without changing the CPU/GPU hardware).

4.

point

When an experienced deep learning engineer works on a new problem, they can Introduction in desperations just problems to train a good model on the first try, Quiz, 10 questions without needing to iterate multiple times through different models. True/False?

1 point

5.

Which one of these plots represents a ReLU activation function?

Figure 1:

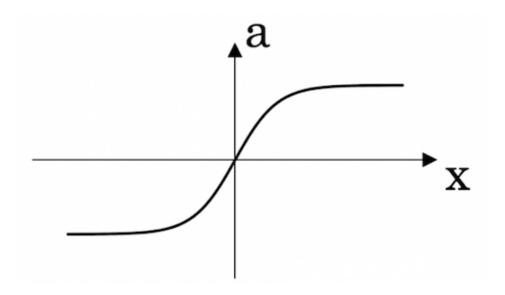

Figure 2:

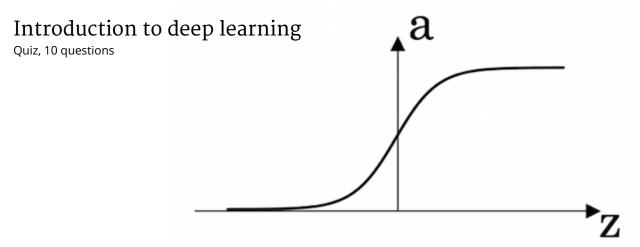

Figure 3:

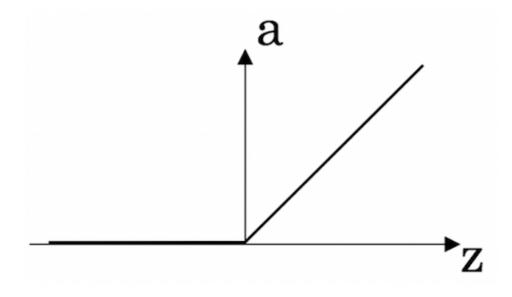

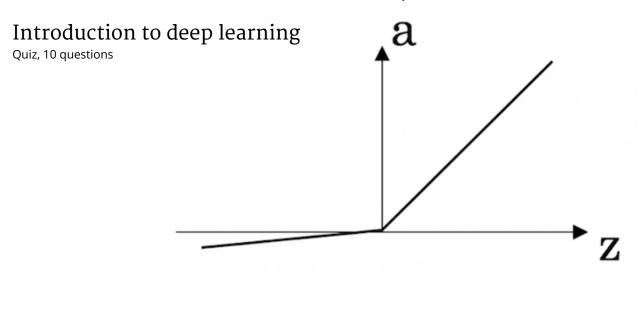

Figure 4:

1 point

6.

Images for cat recognition is an example of "structured" data, because it is represented as a structured array in a computer. True/False?

True

False

1 point

7.

A demographic dataset with statistics on different cities' population, GDP per capita, economic growth is an example of "unstructured" data because it contains data coming from different sources. True/False?

True

False

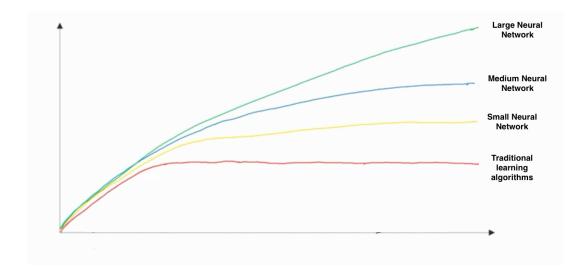

1 point 8. Introduction to French? (Check all that apply.)

It can be trained as a supervised learning problem.
It is strictly more powerful than a Convolutional Neural Network (CNN).
It is applicable when the input/output is a sequence (e.g., a sequence of words).
RNNs represent the recurrent process of Idea->Code->Experiment->Idea->

1 point

9.

In this diagram which we hand-drew in lecture, what do the horizontal axis (x-axis) and vertical axis (y-axis) represent?

- x-axis is the amount of data
  - y-axis (vertical axis) is the performance of the algorithm.
